GENERIC TACTILE IMPRESSION DESIGN OVERVIEW
## DATACARD INLINE LAMINATION MODULE

The tactile impression feature is a unique, entry-level security feature used to increase the tamper resistance of a card as well as highlight and promote the customer brand. We offer several generic designs, as well as to ability to create unique custom-design. This tactile impression feature is available on the following systems:

- Datacard® SD460™ Card Printer
- Datacard® CD800™ Card Printer with Inline Lamination Module

GENERIC TACTILE DESIGNS

Entrust Datacard offers several different generic tactile designs that fit most market applications. These designs showcase a combination of portrait-oriented dies, landscape-oriented dies and dies that can fit either orientation.

Each tactile impression design has a specified orientation — portrait or landscape. Once the die is installed in the tactile impressor module, it cannot be rotated based on card orientation. However, a more symmetrical design can fit both landscape and portrait orientations. Please refer to the Tactile Impression Feature Best Practice Guide

CUSTOM TACTILE DESIGNS

Entrust Datacard also offers the option to create a unique, custom design specific for your ID card program. This tactile impression can contain text, logos, and outlines of images that may vary in design and complexity. Please refer to the Tactile Impression Feature Best Practice Guide for further information on custom die design recommendations and requirements.
